EMPLOYMENT

Consultant - Full Stack Developer | Slalom Consulting   Jun 2022 - present
Poker training web application gives players access to actionable data insights to accelerate learning.
AEM | Javascript | React | jQuery | Java | links: See Portfolio
- Digital Experience Management team focused on user experience including CMS(AEM), marketing automation, platform migrations, website redesigns and optimizations
- Took initiative to lead dev on features, seek guidance and mentorship, as well as mentor and train others
- Gave clients confidence in our team's ability to deliver by leading demos, participating in discovery, triage issues, UAT, and lead training
- Recognized for exceptional performance - hired as associate consultant and promoted to consultant after 6 months, nominated for employee of the quarter

Web Developer | Range Trainer Pro   May 2021 - August 2021
Poker training web application gives players access to actionable data insights to accelerate learning.
Javascript | React | Redux | links: deployment
- Wrote JS algorithms to automate user input to match back end data structure, allowing the input data to be fungible while still being customizable, enhancing user experience
- Created and maintained reusable React components with Redux

Professional Poker Player | Self Employed   *2009 - 2020*
World Series of Poker bracelet winner with net profits over 2 million dollars, highly self motivated, and performed under a high level of pressure

PROJECTS

Frontend Development | *Personal Website & Portfolio*   *Mar 2022*
Javascript | React | CSS | HTML | links: deployment | github
Single page application showcasing my web development skills and experience
- Utilized React components to be responsive, enabling full function for mobile and desktop
- Made use of hooks for interactive components, enhancing user experience

Backend Development | *Reddit Bot*   *Feb 2022*
Python | SQLite3 | API | links: github
Bot designed to crawl a reddit sub and serve up requested data to users
- Generate custom responses to comments by scraping text for prompts
- Utilize Python Reddit API Wrapper to streamline data source
- Persist data in SQLite3 to track completed tasks
- Error handling on API requests, ensuring maximum up time

Fullstack Development | *Boys & Girls Club Emotion Tracker*   *Mar 2021*
Javascript | React | Java | Spring | Okta | AntD | links: github(be) | github(fe)
Application allows children to provide real-time feedback on their experiences at club, giving staff actionable data

- Added CRUD operations for admins to manage club programs using Javascript with AntD tables for user input
- Made context API for state management, using axios to communicate with backend data, verifying Okta & JWT
- Agile workflow with regular stakeholder meetings, ensuring strict adherence to their needs
- Architect backend in Spring Framework that was efficient, and could scale from 4400 current users to 4,000,000+

Frontend Development | *Diablo II Armory*   *Sep 2021*
Javascript | React | links: [deployment](#) | [github](#)
An intuitive tool giving D2 players a resource to test builds with customizable stats, skills, and items
- Integrated in game support; items can be copied from in-game and pasted into D2A
- Context API providing data flow for responsive user inputs

EDUCATION
Bloom Institute of Technology | **Full Stack Web Development & Computer Science**   *May 2021*
